SECTION A: AMENDMENTS TO THE CLAIMS

Please cancel Claims 2, 5, 14, 17 and 18 herein, without prejudice. The following is a complete listing of all the claims.

1. (Currently Amended) A golf club shaft formed by winding a plurality of layers around a mandrel with a main body having a body surface and a mandrel tip having a tip surface that is recessed relative to the body surface of the main body of the mandrel, wherein the mandrel is removed after curing, the golf club shaft comprising:

a first layer of metal-containing prepreg wrapped at a tip of the shaft;
a layer of non-metal fiber prepreg wrapped adjacent to the first layer of metal-containing prepreg and throughout a length of the shaft; and—wherein the non-metal fiber prepreg is supported on the first layer of metal-containing prepreg and forms a generally non-inflected inner surface throughout the length of the shaft; and
a second layer of metal-containing prepreg wrapped adjacent to the layer of non-metal fiber.

2. (Canceled)

3. (Original) The golf club shaft of Claim 1 wherein the golf club shaft has a
 mass of about 80 - 130 g.

- 4. (Original) The golf club shaft of Claim 1 wherein the golf club shaft has a center of mass located at about 45-51 % when measured from the tip and expressed as a ratio to an overall length of the golf club shaft.
 - 5. (Canceled)

- 6. (Currently Amended) The golf club shaft of Claim 1 wherein the <u>first</u> layer of metal-containing prepreg located at the tip of the shaft is an inner-most layer.
- 7. (Currently Amended) The golf club shaft of Claim 6 wherein the inner most first layer of metal-containing prepreg is located along a length of the shaft between a tip of the shaft and 40% of an overall length of the shaft.
- 8. (Currently Amended) The golf club shaft of Claim 6 wherein the layer of non-metal fiber prepreg is wrapped over the inner most <u>first</u> layer of metal-containing prepreg.
- 9. (Currently Amended) The golf club shaft of Claim 1 wherein the <u>first</u> layer of metal-containing prepreg comprises a metal having a specific mass greater than 7g/cm³.
- 1 10. (Currently Amended) The golf club shaft of Claim 1 wherein the <u>first</u> layer of 2 metal-containing prepreg contains a metal fiber.

- 20. (Previously Presented) The golf club shaft of Claim 19 wherein the layer of metal-containing prepreg wrapped at the tip of the shaft comprises a first layer of metal-containing prepreg and a second layer of metal-containing prepreg.
 - 21. (Previously Presented) The golf club shaft of Claim 19 wherein the golf club shaft has a mass of about 80 130 g.

- 22. (Previously Presented) The golf club shaft of Claim 19 wherein the golf club shaft has a center of mass located at about 45~51% when measured from the tip and expressed as a ratio to an overall length of the golf club shaft.
- 1 23. (Previously Presented) The golf club shaft of Claim 19 wherein the gold club shaft has an elasticity index (EI) value about $3.0 \sim 4.5 \ kgf \cdot m^2$ at 200 mm from the tip.
- 1 24. (Previously Presented) The golf club shaft of Claim 19 wherein the layer of metal-containing prepreg located at the tip of the shaft is an inner-most layer.
- 25. (Previously Presented) The golf club shaft of Claim 24 wherein the inner-most layer of metal-containing prepreg is located along a length of the shaft between a tip of the shaft and 40% of an overall length of the shaft.
 - 26. (Previously Presented) The golf club shaft of Claim 24 wherein the layer of non-metal fiber prepreg is wrapper over the inner-most layer of metal-containing prepreg.

- 1 28. (Previously Presented) The golf club shaft of Claim 19 wherein the layer of 2 metal-containing prepreg contains a metal fiber.
 - 29. (Previously Presented) The golf club shaft of Claim 19 wherein the layer of metal-containing prepreg contains a metal powder.
 - 30. (Previously Presented) The golf club shaft of Claim 29 wherein the metal powder is dispersed in a synthetic resin sheet.

- 31. (Previously Presented) The golf club shaft of Claim 30 wherein the metal powder comprises tungsten.
- 32. (Previously Presented) The golf club shaft of Claim 30 wherein the synthetic resin sheet comprises epoxy resin.
- 1 33. (Previously Presented) A golf club shaft formed by winding a plurality of 2 layers around a mandrel that is removed after curing comprising:
- a layer of metal-containing prepreg that contains a metal fiber and is
 wrapped at an innermost layer at a tip of the shaft; and
 - a layer of non-metal fiber prepreg wrapped adjacent to the layer of metal-containing prepreg throughout a length of the shaft.

- 34. (Previously Presented) The golf club shaft of Claim 33 wherein the layer of metal-containing prepreg wrapped at the tip of the shaft comprises a first layer of metal-containing prepreg and a second layer of metal-containing prepreg.
 - 35. (Previously Presented) The golf club shaft of Claim 33 wherein the golf club shaft has a mass of about 80 130 g.

- 36. (Previously Presented) The golf club shaft of Claim 33 wherein the golf club shaft has a center of mass located at about 45~51% when measured from the tip and expressed as a ratio to an overall length of the golf club shaft.
- 37. (Previously Presented) The golf club shaft of Claim 33 wherein the gold club shaft has an elasticity index (EI) value about $3.0 \sim 4.5 \ kgf \cdot m^2$ at 200 mm from the tip.
- 38. (Previously Presented) The golf club shaft of Claim 33 wherein the layer of metal-containing prepreg located at the tip of the shaft is an inner-most layer.
- 39. (Previously Presented) The golf club shaft of Claim 38 wherein the inner-most layer of metal-containing prepreg is located along a length of the shaft between a tip of the shaft and 40% of an overall length of the shaft.
- 40. (Previously Presented) The golf club shaft of Claim 38 wherein the layer of non-metal fiber prepreg is wrapper over the inner-most layer of metal-containing prepreg.

41. (Previously Presented) The golf club shaft of Claim 33 wherein the layer of metal-containing prepreg comprises a metal having a specific mass greater than 7 g/cm³.
